

PUNCH MARKING OF STEEL PLATES

Sidastico can mark the upper surface of the steel plates with permanent punching/etching of a string of maximum 38 characters, including letters, numbers and spaces.

Punch marking actually cuts into the surface of the steel sheets, albeit with limited stress for the materials.

Punch marking is applied exclusively on express demand of the client and can imply additional costs: please check upfront with your Sidastico Sales Manager for details on such costs and for further details about punch marking.
